

P.O. Box 26 Gull Lake, SK S0N 1A0

Southern Pressure Tester's has a full line of 9 BOP pressure testing trucks, 1 & 2 Ton four wheel drive units. These units have the capability to pump slowly at 2 to 3 liters per minute & up to 20 liters per minute at a working pressure of 3000 kPa.

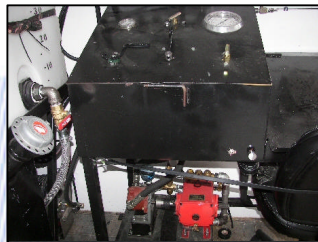

Available 24 hours a Day

1-866-533-1333

Services:

- Pressure testing on well control equipment
- Leak - off tests
- Pressure testing pipe line
- New well-sets and Flowlines
- Pressure testing of batteries and satellites
- Pumping chemicals into wells or pipelines
- Pumping up of packers for downhole tools

We carry a large assortment of test cups on each truck. Southern Pressure Tester's provides units for pipeline, wellhead, and battery jobs with capabilities of 5,000 kPa pressures. These units have double compartments, 3m³ lined tank, suitable for pumping chemical in to a wellhead or pipeline and includes a computer generated graph with detailed print out. All units' gauges and chart recorders calibrated frequently.

Southern Pressure Tester's Ltd. has a combined service with Wellhead Red Inc. in using the PSC-5000 that holds pressure on a well after a cement job to prevent gas migration. This enables the rig to be released and moved to another location.

Benefits with Wellhead Red's PSC-5000 include:

- Minimizes costly remedial treatments
- Cement bond under pressure is a proven procedure
- Casing slips can be installed with desired tension while cement is in solution
- Pressures and volumes can be recorded
- Preventing gas migration addresses safety & environmental issues
- Good cementing practices and holding pressure can eliminate micro annulus gas releases.
